| Grade | 10.00 out of 10.00 (100%) |

Question 1

Correct

Mark 1.00 out of 1.00

Problem Statement

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

- First Line Contains Integer m – Size of array
- Next m lines Contains m numbers – Elements of an array

Output Format

- First Line Contains Integer – Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```
#include <stdio.h>
int main() {
    int m;
    scanf("%d", &m);
    int arr[m];
    for (int i = 0; i < m; i++) {
        scanf("%d", &arr[i]);
    }
    int left = 0;
    int right = m - 1;
    int firstZeroIndex = -1;
    while (left <= right) {
        int mid = left + (right - left) / 2;
        if (arr[mid] == 0) {
            firstZeroIndex = mid;
            right = mid - 1;
        } else {
            left = mid + 1;
        }
    }
    printf("%d", firstZeroIndex + 1);
}
```

| | Input | Expected | Got | |
|---|--|----------|-----|---|
| ✓ | 5 1 1 1 0 0 | 2 | 2 | ✓ |
| ✓ | 10 1 1 1 1 1 1 1 1 1 1 | 0 | 0 | ✓ |

| Time taken | 20 mins 25 secs |
| Marks | 1.00/1.00 |
| Grade | 10.00 out of 10.00 (100%) |

Question 1

Correct

Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`
Output: `3`

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`
Output: `2`

Constraints:

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

For example:

| Input | Result |
|--------------------|--------|
| 3 3 2 3 | 3 |
| 7 2 2 1 1 1 2 2 | 2 |

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 int main(){
3     int n;
4     scanf("%d",&n);
5     int a[n];
6     for(int i=0;i<n;i++){
7         scanf("%d",&a[i]);
8     }
9     for(int i=0;i<n;i++){
10        int count=0;
11        for(int j=0;j<n;j++){
12            if(a[i]==a[j]){
13                count++;
14            }
15        }
16        if(count>n/2){
17            printf("%d",a[i]);
18            break;
19        }
20    }
21 }
```

| | Input | Expected | Got | |
|---|------------|----------|-----|---|
| ✓ | 3 3 2 3 | 3 | 3 | ✓ |

Passed all tests! ✓

Correct

Question 1

Correct

Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```

1  #include <stdio.h>
2  int Floor(int arr[], int n, int x) {
3      int low = 0, high = n - 1;
4      int floorValue = -1;
5      while (low <= high) {
6          int mid = low + (high - low) / 2;
7          if (arr[mid] == x) {
8              return arr[mid];
9          } else if (arr[mid] < x) {
10             floorValue = arr[mid];
11             low = mid + 1;
12         } else {
13             high = mid - 1;
14         }
15     }
16     return floorValue;
17 }
18 int main() {
19     int n;
20     scanf("%d", &n);
21     int arr[n];
22     for (int i = 0; i < n; i++) {
23         scanf("%d", &arr[i]);
24     }
25     int x;
26     scanf("%d", &x);
27     int result = Floor(arr, n, x);
28     if (result == -1) {
29         printf("No floor value found\n");
30     } else {
31         printf("%d\n", result);
32     }
33     return 0;
34 }

```

4-Two Elements sum to x ▶

[Dashboard](#) / [My courses](#) / [CS23331-DAA-2023-CSE](#) / [Divide and Conquer](#) / [4-Two Elements sum to x](#)

Question 1

Correct

Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".
Note: Write a Divide and Conquer Solution

Input Format

- First Line Contains Integer n – Size of array
- Next n lines Contains n numbers – Elements of an array
- Last Line Contains Integer x – Sum Value

Output Format

- First Line Contains Integer – Element1
- Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int Pair(int arr[], int left, int right, int x) {
3     if (left >= right) {
4         return 0;
5     }
6     if (arr[left] + arr[right] == x) {
7         printf("%d\n%d\n", arr[left], arr[right]);
8         return 1;
9     }
10    else if (arr[left] + arr[right] < x) {
11        return Pair(arr, left + 1, right, x);
12    }
13    else {
14        return Pair(arr, left, right - 1, x);
15    }
16 }
17 int main() {
18     int n;
19     scanf("%d", &n);
20     int arr[n];
21     for (int i = 0; i < n; i++) {
22         scanf("%d", &arr[i]);
23     }
24     int x;
25     scanf("%d", &x);
26     if (Pair(arr, 0, n - 1, x)) {
27     }
28     else {
29         printf("No\n");
30     }
31     return 0;
32 }
```

| Grade | 10.00 out of 10.00 (100%) |

Question 1

Correct

Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

| Input | Result |
|---------------------|----------------|
| 5 67 34 12 98 78 | 12 34 67 78 98 |

Answer:

```

1  #include <stdio.h>
2  void swap(int* a, int* b) {
3      int temp = *a;
4      *a = *b;
5      *b = temp;
6  }
